

Addiction is a significant health and social problem and one of the largest preventable causes of disease globally. Neuroscience promises to revolutionise our ability to treat addiction, lead to recognition of addiction as a real disorder in need of medical treatment and thereby reduce stigma and discrimination. However, neuroscience raises numerous social and ethical challenges: “ If addicted individuals are suffering from a brain disease that drives them to drug use, should we mandate treatment? “ Does addiction impair an individuals ability to consent to research or treatment? “ How will neuroscience affect social policies towards drug use? Addiction Neuroethics addresses these challenges by examining ethical implications of emerging neurobiological treatments, including: novel psychopharmacology, neurosurgery, drug vaccines to prevent relapse, and genetic screening to identify individuals who are vulnerable to addiction. Essential reading for academics, clinicians, researchers and policy-makers in the fields of addiction, mental health and public policy.

The Amish Heiress (The Paradise Chronicles Book 1), Garden Retreats: Creating an Outdoor Sanctuary, The Early Years Matter: Education, Care, and the Well-Being of Children, Birth to 8 (Early Childhood Education Series), Fascist Thought and Totalitarianism in Italys Secondary Schools: Theory and Practice, 1922-1943 (Studies in Modern European History), A Text Book on the Method of Least Squares, Final Wisdom: Volume Four of The Wisdom of the Rooms, Fish Change Direction in Cold Weather, Edward Scissorhands Vol. 1: Parts Unknown, Freedom of Association: Digest of Decisions and Principles of the Freedom of Association Committee of the Governing Body of the ILO, Thomas Nast Americas Greatest Political Cartoonist: A History of Pictorial Caricatures of 19th Century Society,
