

This review of the amphibians of the Caucasus offers an overview of the physiology of the Caucasus and a history of amphibian research, as well as keys to all species at the main ontogenetic stages are presented. All species and subspecies as well as their habitats are illustrated. Species accounts include current name, synonymy if any, type territory, taxonomic status, geographical, landscape and vertical distribution patterns, a detailed morphological description, mode(s) of life, reproduction, embryonic, larval and postmetamorphic development, feeding, predators, parasites and defensive reactions, population structure and dynamics, main constraining factors restricting the distribution, and conservation measures.
