

With biotechnology products common technology as the main line, the book explores the technical problems during the production process of biotechnology products, including industrial microbial breeding, preparation and preservation, industrial culture medium and the design, aseptic technique during the biological process, biological reaction kinetics, principles of fermentation processes, bioreactor and biological process amplification, parameter detection and control in biological reaction process, separating and purification technology of biological products, biological products technology and application. The biotechnology mainly researches technology problems in biotechnology products production.
