

This study explains the role of forests in the hydrological cycle, with a particular focus on critical, red flag forest situations such as mountainous or steep terrain, river and coastal areas and swamp ecosystems, as well as the special case of mountainous small islands. It addresses the protection of municipal water supplies and emerging systems of payment for watershed services. This state-of-knowledge publication will be of interest to a broad range of technical experts, scientists and decision-makers. Also published in French and Spanish.
