

This intriguing volume provides a thorough examination of the historical roots of global climate change as a field of inquiry, from the Enlightenment to the late twentieth century. Based on primary and archival sources, the book is filled with interesting perspectives on what people have understood, experienced, and feared about the climate and its changes in the past. Chapters explore climate and culture in Enlightenment thought; climate debates in early America; the development of international networks of observation; the scientific transformation of climate discourse; and early contributions to understanding terrestrial temperature changes, infrared radiation, and the carbon dioxide theory of climate. But perhaps most important, this book shows what a study of the past has to offer the interdisciplinary investigation of current environmental problems.

Seeding and Nurturing the Garden of Your Soul: Walking the Middle Road, DK Readers: Micromonsters (Level 4: Proficient Readers), Iroquois: Their Art and Crafts, Integral Methods in Science and Engineering: Computational and Analytic Aspects, Jacobson, N. Lectures in Abstract Algebra 1, International space activities: Hearings before the Subcommittee on Space Science and Applications of the Committee on Science and Technology, U.S. ... second session, May 16, 17, 18, 1978,
