

First published in 1987, this book describes tissue (cell and organ) culture techniques which could be used at a critical predevelopment stage to screen for drug-inducing toxicity or to analyse the molecular mechanisms of toxicity at a later stage in parallel with investigative studies. This type of research has important ethical, financial and scientific implications. In particular, less animals and compound are required in in vitro research and more detailed information at the cellular and subcellular levels can be obtained. The volume brings together the once disparate knowledge of cultural techniques and thus provides an important reference work for industrial and academic toxicologists. It could also form a framework for discussion of potential improvements and modification of toxicity testing.

Cytotechnology. ;5 Suppl Alternative methods in toxicology tests: in vitro toxicity. Cinelli S(1), Falezza A, Meli C, Ciliutti P, Vericat JA. Cambridge Core - Pathology and Laboratory Science - In Vitro Methods in Toxicology - edited by C. K. Atterwill. In vitro toxicity testing is the scientific analysis of the effects of toxic chemical substances on cultured bacteria or mammalian cells. In vitro (literally 'in glass') testing methods are employed primarily to identify. Both in vitro and in vivo methods are routinely used by industries and regulatory authority in toxicity testing, GHS classification and chemical.

In vitro methods rely on cells or tissues that grow on special dishes in the laboratory. Systems Toxicology Meta-Analysis of In Vitro Assessment Studies: .

Regulatory toxicity testing in animals raises a number of scientific, humanitarian, legislative, practical and economic questions and conflicts. For example, while. In the context of animal toxicity testing Hartung and McBride. () evoked the animals methods the edge over in vivo testing, taking away that adjunct of. Introduction. An expert roundtable discussion was convened by Applied In Vitro Toxicology to address the increasingly important topic of the. In Vitro Methods of Toxicity Evaluation. Annual Review of Pharmacology and Toxicology. Vol. (Volume publication date April ).
