The major stages of the flower life cycle are the seed, germination, growth, reproduction, pollination, and seed spreading stages. The plant life cycle starts with a seed; every seed holds a miniature plant called the embryo. Some seeds are capable of growing even after many years if they are kept cool and dry. Plants are the living things, they grow and reproduce like any other living thing. They follow a cyclic process of starting a new life, growing, and then coming back to the starting stage (reproducing). Plants start their life from a seed and grow-up to become a mature plant. Biennials are plants that take 2 years to go through their life cycle. They grow from a seed, then rest over winter. In spring, they produce flowers, set seeds and die. New plants grow from the seeds. Playing with Time. A collection of clips showing the best in timelapse nature films. More clips from Travelling. Planting flowers. Duration: Describe the importance of nutrients to plants in GROW UP! . associate plants needs with plant growth. LIFE SKILL: Acquiring, analyzing, interpreting and. The seed will sprout and produce a tiny, immature plant called a seedling. As described above this life cycle is generally used by the flowering plants. Science of Life Explorations provides plants with water and the nutrients they need to be healthy. In turn Not enough sun will slow down a plant's growth and.
