Los nietos de Adan y Eva (Spanish Edition), MCS-51 SCM Theory and embedded system application, Genealogy, Bilder im Geschichtsunterricht (German Edition), Take Off With Microsoft Flight Simulator, Insights Into The Person I Used To Be.: Past, Present And Future, Tim in Danger,

The map below shows the location of the world's tropical rainforests. Rainforests cover only a small part of the earth's surface - about 6%, yet they are home to. Found in the tropical climate near the equator, rain forests make up six percent of the earth's land surface, but produce 40 percent of its oxygen. The rain forest is made up of four layers: emergent, upper canopy, understory, and forest floor. Wood from threatened south-east Asian rainforests has been used to build venues for the Tokyo Olympics, according to complaints filed.

A brief treatment of rainforests follows. For full treatment, see tropical forest. Rainforests usually occur in regions where there is a high annual.

Facts, figures, news, pictures, and information about tropical rainforests. About rainforests Â· Rainforest animals Â· Rainforest people Â· Why are rainforests important? Why are rainforests disappearing? How can we save rainforests?.

Rainforests are vitally important, producing most of the oxygen we breathe and providing habitat for half of the planet's plants and animals.

There are two types of rainforests - temperate and tropical. Tropical and temperate rainforests have some things in common. Both have very dense vegetation. Tropical forests are some of the richest, most exciting areas on earth. They are home to gigantic trees, colourful birds and a huge variety of fascinating mammals . There are two types of rainforests, tropical and temperate. Tropical rainforests are found closer to the equator and temperate rainforests are found farther north.
