

Great advances have been made in the area of sensory physiology during the last few decades, and these developments seem to be asking for a comprehensive review that is manageable in size and cohesive in content. This volume has been written with that goal in mind. In the first place I would like to thank Mr. R. van Frank of Appleton-Century-Crofts for asking me to do the job, and my wife for persuading me to do it, for writing it was an enjoyable task. Much of the discussion of factual data set to print here evolved in question-and-answer sessions in courses given to students in physiology, psychology, and medicine, and to physicians training in neurology, neurosurgery, and psychiatry. Besides my students, I had in mind while preparing this text my professional colleagues laboring on their lecture notes under circumstances perhaps not unlike my own. The material is divided in two parts. The first deals with the manner of representation of sensory information in peripheral nerves: the so-called first order code. The second half of the text deals with the handling of sense data by the central nervous system. One reason for dividing the material in this way is that many of the features of the first-order code are common to all sensory modalities. The intensity, the place, the rhythm, the quality of stimuli are encoded by rules which are applicable, albeit with appropriate modifications, to all senses. Furthermore, these rules of coding are today rather well understood.

Review of Progress in Quantitative Nondestructive Evaluation: Volume 4A, The Conscience of a Libertarian: Empowering the Citizen Revolution with God, Guns, Gold and Tax Cuts, MEIN EID - Der fabelhafte Tod des Joseph Goebbels: Eine Tragik-Groteske (German Edition), NASA technical paper, Double Standards, Stirring Australian Speeches: Definitive Collection from Botany to Bali,

Buy Sensory Coding in the Mammalian Nervous System on shakethatbrain.com ? FREE SHIPPING on qualified orders. 1 Items in the Series Neuroscience series, 4. Cover art for item  $\hat{A}$ .
