

From the introduction... The petroleum industry needs to train a new generation of petroleum geoscientists. In order for this to happen, universities must have appropriate tools for doing this training. Many university instructors do not have a strong background in petroleum geology and need applied problem sets pertaining to subsurface interpretation. These teaching sets were developed to address these issues. The exercises range from introductory (meant for undergraduate majors in geology within their junior or senior years) to advanced graduate level analysis of subsurface geology. American Association of Petroleum Geologists (AAPG) Founded in 1917, AAPG is the worlds largest professional geological society. AAPG is a pillar of the world-wide scientific community. Our books foster timely scientific research, advance the science of geology and promote the most efficient methods of energy exploration & processing technology and practices available today. Some of the areas we publish in include: Well Log Analysis Geological Modeling Carbonate Petrology Seismic Imaging Reservoir Characterization Regional Petroleum Analysis Tectonics and Sedimentation Stratigraphy
