

A full understanding of the developmental process in individuals requires contributions from disciplines including developmental biology and psychology, physiology, neuropsychology, social psychology, sociology and anthropology. This ambitious and wide-ranging book integrates the findings from these and related areas to form a holistic view of human development from conception to death. Distinguished scientists have combined their expertise in a synthesis of biological and social science that will demand the attention of all researchers and practitioners concerned with human development across the lifespan. Based on a Nobel symposium, the topics discussed range from the function and development of single cells to the whole organism interacting with its environment. Drawing on new theories and models, including the study of nonlinear dynamic systems and chaos theory, this book represents a major step in the move toward an integrated science of human development.

Costumes for Your Antique Dolls, Baseball Math, Grandslam Activities and Projects for Grades 4-8, Scientific Papers of C.V. Raman: Volume III: Optics, Hindsight, Dimensions of Manpower Policy: Programs and Research. A Volume Commemorating the 20th Anniversary of the W.E. Upjohn Institute for Employment Research, Stable Story!, Island Counting 1 2 3,
