

On Shishmaref Island in Alaska, homes are being washed into the sea. In the South Pacific, small island nations face annihilation by encroaching waters. In coastal Louisiana, an area the size of a football field disappears every day. For these communities, sea level rise isn't a distant, abstract fear: it's happening now and it's threatening their way of life. In *The Rising Sea*, Orrin H. Pilkey and Rob Young warn that many other coastal areas may be close behind. Prominent scientists predict that the oceans may rise by as much as seven feet in the next hundred years. That means coastal cities will be forced to construct dikes and seawalls, or to move buildings, roads, pipelines, and railroads to avert inundation and destruction. The question is no longer whether climate change is causing the oceans to swell, but by how much and how quickly. Pilkey and Young deftly guide listeners through the science, explaining the facts and debunking the claims of industry-sponsored skeptics. They also explore the consequences for fish, wildlife, and people. While rising seas are now inevitable, we are far from helpless. By making hard choices - including uprooting citizens, changing where and how we build, and developing a coordinated national response - we can save property, and ultimately lives. With unassailable research and practical insights, *The Rising Sea* is a critical first step in understanding the threat and keeping our heads above water.

The Complete Guide to Investment Opportunities, Performance Management in a Week, A Biographical History of Philosophy (Cambridge Library Collection - Philosophy), Tabers Cyclopedic Medical Dictionary, 21st Edition + Medical Terminology Systems, 6th Edition Package, Environmental Modelling for Developing Countries (Natural Resources and the Environment Series), Azerbaijan: Caucasian Splendor From Baku to Sheki, Vs. Reality: The Vs.
