

This book concentrates on Tornado Reconnaissance, looking at the two dedicated squadrons – II (AC) and XII – the systems they employed, and their worth to the overall structure, interspersed with personal tales of front line operations. This book explains the concept of the internal recon system, TIRRS, its development and use as well as its replacement systems JRP and Raptor, including their use over Iraq. There is a station history of Marham where two Tornado squadrons and one Canberra squadron are based, and detailed squadron histories and their roles in both recon and the RAF in general are provided. It also looks at Time Sensitive Targets (TST), Scud hunting in Iraq in the Gulf War, and includes an interview with F/L Peter Durke on how TIRRS developed.

In terms of the most damaging tornadoes since , an April 27, , EF-4 twister left injured in central Alabama, and was part of a devastating tornado outbreak in the region over several days. The Joplin twister, an EF-5, was the deadliest tornado since , and the 7th deadliest in U.S. history. A tornado appears as a rotating, funnel-shaped cloud that extends from a thunderstorm to the ground with whirling winds that can reach miles per hour. Damage paths can be in excess of one mile wide and 50 miles long. Occasionally, tornadoes develop so rapidly that little, if any, advance warning is possible.

As such, it is fitting that these astonishing whirlwinds be catalogued and their history preserved. Through such a collection of past tornadoes we can learn their .

More than people were killed by the world's deadliest tornado. For comparison, the deadliest tornado outbreak in U.S. history was on.
